

ZINK-GRO[®] 20

Ammoniated Liquid Zinc
16-0-0-20

1 Gallon = 2.2 Pounds of ZINC
AND 1.75 lbs of NITROGEN!

Zink-Gro 20 is a clear solution that contains 16% nitrogen and 20% zinc. Zink-Gro 20 weighs 11.2 pounds per gallon and supplies 2.2lbs of soluble zinc per gallon. Zink-Gro 20 is an excellent source of zinc to use in liquid starters. Zink-Gro 20 will mix at any ratio with UAN solutions or Ammonium Thio Sulfate. However, when polyphosphate is present in starter mixes, the following rule of thumb should be remembered. Do not mix more than 1 part zinc with 20 parts of polyphosphate to keep a true solution. Exceeding this will induce zinc precipitants, thus causing handling problems.

One half to one pound of actual zinc in the starter solution should be plenty of zinc to get the crop to harvest provided that the background soil zinc levels are being maintained.
